

Grazing4AgroEcology

Grazing4AgroEcology

In Grazing4AgroEcology (G4AE), grazing farmers are for the first time at the centre of a thematic network in providing solutions for sustainable, integrated grazing-based animal production systems. The Partner Farm Network of G4AE of 120 Partner farms (15 per country) will enable the capture and implementation of best-practices and innovations to promote grazing for agroecology.

A multi-actor approach based on co-creation and knowledge sharing will actively involve all relevant actors including farmers, industry, education, researchers, advisors, society, etc. This will improve the uptake of the innovation capital and

significantly contribute to the improvement of the transferability of best practices and innovations.

G4AE will innovate the grazing sector by strengthening the capacity of farmers to understand more objectively their own agro-ecological performance through an integrated self-assessment tool.

G4AE will boost digitalization through webinars, digital interactions, videos and media training. G4AE will provide a rich set of practical hands-on knowledge and training material for a vast community of current and future grazing farmers, available in a Knowledge & Information Management System.
