

The LIVINGAGRO project Workshop: Virtual Fences, GPS Collars and Adaptive Grazing Management June 27, 2023

LIVINGAGRO project *Technology transfer workshop* *Virtual fences and GPS collars*

The LIVINGAGRO project Workshop: Virtual Fences, GPS Collars and Adaptive Grazing Management June 27, 2023

In recent years, a technology linked to a new concept of “precision grazing” has developed: GPS collars for grazing animals and so-called “virtual fences”. LIVINGAGRO’s Living Lab expressed an interest in this innovation, while noting some concerns related to cost and use in certain contexts. This workshop will consider the potential of these devices, discussing the latest technological developments and the possibility of their extensive future use and examining the results of scientific experiments.
